Medford's Messenger

a publication of

Bureau of Land Management Medford District Office

Fall 2009

Dear Public Land User:

The primary purpose of Medford's *Messenger* is to keep you informed of ongoing and proposed activities on the Medford District. It contains listings of projects, by resource area, that have been completed recently and identifies newly proposed projects. It is our desire to keep you informed about issues, activities, and opportunities we think are important to our publics. More importantly, we are seeking ideas and comments from those who may be affected by our multiple-use management programs.

This planning update has been organized to give you a brief description of activities occurring in several programs, as well as descriptions of new projects being considered by the district. Additional information can be obtained from the people listed in the descriptions. These contact people are familiar with their projects and are able to answer questions and provide more details on the projects. They are interested in receiving information you wish to share concerning any of the projects or project areas.

A copy of the Medford *Messenger* is available for viewing on the Medford District's web page, at:
<http://www.blm.gov/or/districts/medford/plans/index.php>

Special Notice: To better conserve resources and begin transitioning to a new national BLM planning process, we have changed to electronic availability of the Medford Messenger. It will be available on a quarterly basis throughout the year. A paper copy will be available at libraries in Medford and Grants Pass, and at the Medford District BLM Offices in Medford and Grants Pass.

If you wish to receive a paper update, please confirm your address in written correspondence to our office (address below).

Our practice is to make comments on projects available for public review, including names and home addresses of respondents. Unless you specifically request us to withhold your name and address, it will be made available to the public on request.

We would appreciate any comments or suggestions you may have regarding this Planning Update including how it could be improved to make it more useful to you.

Thank you for your continued interest in BLM's management of your Public Lands. If you have any questions on information in this Planning Update, stop by the office or call us at 541-618-2200.

Sincerely,

Timothy B. Reuwsaat

National Environmental Policy Act Analysis and Documentation

The review of the environmental effects of a proposed management action can occur in any of four ways: categorical exclusions, administrative determinations, environmental assessments, or environmental impact statements.

1. A *categorical exclusion* is used when it has been determined that some types of proposed activities do not individually or cumulatively have significant environmental effects and may be exempt from requirements to prepare an environmental analysis. Departmental policy and the Council of Environmental Quality regulations require that categorical actions be subjected to sufficient environmental review to determine whether any of the extraordinary circumstances apply. In addition, no public notice of a federal agency's use of a categorical exclusion is required.

Certain activities within the BLM's forestry program have been categorically excluded from preparation of an Environmental Assessment (EA) or Environmental Impact Statement (EIS). The purpose of a categorical exclusion is to eliminate the need for unnecessary paperwork under NEPA. Specifically, Council of Environmental Quality (CEQ) regulations for the National Environmental Policy Act (NEPA) at 40 CFR 1508.4 state that:

"Categorical exclusion' means a category of actions which do not individually or cumulatively have a significant effect on the human environment and which have been found to have no such effect in procedures adopted by a Federal agency in implementation of these regulations (Sec.1507.3) and for which, therefore, neither an environmental assessment nor an environmental impact statement is required.... Any procedures under this section shall provide for extraordinary circumstances in which a normally excluded action may have a significant environmental effect."

In implementation of the NEPA regulations, the BLM has developed categorical exclusions for certain silvicultural activities, such as reforestation, pre-commercial treatments, brush control, sample tree falling, salvage, commercial thinning, and hazardous fuels reduction of limited acres. In developing categorical exclusions, the BLM demonstrated through rulemaking procedures how these actions do not typically result in significant environmental effects and set forth the methodology and criteria used to define the categories of actions. These rulemaking procedures included extensive public involvement and input, and CEQ review, regarding appropriate limits on the use of the categorical exclusion to assure that any categorically excluded action would remain within the effects of actions covered in the analysis for the rulemaking.

As such, in deciding whether to proceed with such actions, the BLM will review their particular conditions to ensure that no extraordinary circumstances exist, as listed in the Department of the Interior's NEPA Manual at 516 DM 2, Appendix 2, that would preclude the use of a categorical exclusion. The Medford District/Resource areas maintain on site NEPA registers that list on going actions, and seek information from the

public as to whether extraordinary circumstances exist for any of these ongoing actions that are categorically excluded. An “extraordinary” circumstance is one that could have significant environmental effects beyond the “ordinary” circumstances already described and considered as applicable to the excluded actions in the rulemaking procedure. These categorically excluded actions, by regulation, do not require the documentation necessary for an EA or EIS. The public was also provided a formal opportunity to participate in the agency’s review and approval of these categorically excluded activities. Given this context, the BLM may choose to proceed with these actions as part of the ordinary course of business in managing forest land with the posting of a notice of decision on the District internet site. This notice would advise the public of the formal administrative review process for these individual actions available under 43 CFR 4.450. Depending on circumstances, however, the BLM may invoke, by publishing a notice in a local newspaper of record, the administrative review process under 43 CFR 5003 for certain individual forest management actions. Categorical exclusions posted on the website will have their individual administrative remedy process contained in the document.

If you are interested in any of these types of actions, more information can be obtained from our website (www.blm.gov/or) or by contacting the Medford District office. We can give you information on current projects.

2. An *administrative determination* is a determination by BLM that NEPA documentation previously prepared by the BLM fully covers a proposed action and no additional analysis is needed. This procedure is often used in conjunction with a plan conformance determination. If an action is fully in conformance with actions specifically described in the RMP and analyzed in the RMP/FEIS, a plan conformance determination may be made and no additional analysis would be needed. A recent procedure now being implemented by the BLM is called a determination of NEPA adequacy (DNA) in which an action is examined in the light of existing NEPA documents to determine if NEPA requirements have been met.
3. An *environmental assessment* (EA) is prepared to assess the effects of actions that are not exempt from NEPA, are not categorically excluded, and are not covered by an existing environmental document. An EA is prepared to determine if a proposed action or alternative will significantly affect the quality of the human environment. In an effort to save paper and printing costs environmental assessments will be available on our website for your review and comment. If you desire a paper copy please contact us and we will send you a copy by mail.
4. Major proposals that will significantly affect the environment and that have not been previously analyzed through an *environmental impact statement* (EIS) require that an EIS be prepared.

Abbreviations and Definitions

ACEC/RNA—Area of Critical Environmental Concern/Research Natural Area

BO—Biological Opinion

CE—Categorical Exclusion—Actions which do not have significant effects on the environment and for which an Environmental Assessment (EA) or an Environmental Impact Statement (EIS) is not required.

EA – Environmental Assessment – A concise public document that briefly provides evidence and analysis of a proposed Federal action. It is used to determine whether further analysis needs to be done for an Environmental Impact Statement (EIS) or a Finding of No Significant Impact (FONSI).

GFMA—General Forest Management Area

IDT—Interdisciplinary Team—A group of resource specialists, whose participation is determined by the issues relating to the project proposal, and who conduct environmental analysis.

LSR—Late-Successional Reserves—One of the seven Federal land designations set forth in the *Northwest Forest Plan*. These reserves will maintain a functional, interactive, late-successional and old-growth forest ecosystem.

Matrix Lands—One of the seven Federal land designations set forth in the *Northwest Forest Plan*. Most timber harvest contributing to the Allowable Sale Quantity takes place in this area.

MBF—thousand board feet.

MMBF—million board feet

NEPA—National Environmental Policy Act—A federal law which sets the systematic interdisciplinary analysis to achieve integrated consideration of physical, biological economic, and other sciences to provide for an informed decision. The process provides for public participation in the development, review, and revision of certain activities on Federal Lands.

RMP—Resource Management Plan—A land use plan prepared by the BLM in accordance with the Federal Land Policy and Management Act (FLPMA).

Scoping—An early and open part of environmental analysis that allows interested public and other Federal, state and local agencies the opportunity to provide issues, concerns and opportunities relative to proposed project actions. Scoping is required by regulation for Environmental Impact Statements.
